How Children Learn the Meanings of Words 2002-01-25

How do children learn that the word dog refers not to all four legged animals and not just to Ralph but to all members of a particular species? How do they learn the meanings of verbs like think, adjectives like good, and words for abstract entities such as mortgage and story? The acquisition of word meaning is one of the fundamental issues in the study of mind. According to Paul Bloom, children learn words through sophisticated cognitive abilities that exist for other purposes. These include the ability to infer others’ intentions, the ability to acquire concepts, an appreciation of syntactic structure, and certain general learning and memory abilities. Although other researchers have associated word learning with some of these capacities, Bloom is the first to show how a complete explanation requires all of them. The acquisition of even simple nouns requires rich conceptual, social, and linguistic capacities interacting in complex ways.

This book requires no background in psychology or linguistics and is written in a clear, engaging style. Topics include the effects of language on spatial reasoning, the origin of essentialist beliefs, and the young child’s understanding of representational art. The book should appeal to general readers interested in language and cognition as well as to researchers in the field.

First published in 1987, the purpose of this volume has been to move beyond a collection of the most recent studies in the area of vocabulary learning. The contributors and researchers who, although they may differ in their views on vocabulary acquisition and instruction, acknowledge that many of the same questions motivate their work. These questions and the way they have addressed them are included in order to cover the full range of views on vocabulary learning.
emphasize these underlying commonalities with the hope the relationships among contrasting perspectives will become more apparent.
