Mctaggart's argument for the unreality of time first published in 1908 set the agenda for 20th century philosophy of time yet there is very little agreement on what it actually says nobody agrees with the conclusion but still everybody finds something important in it this book presents the first critical overview of the last century of debate on what is popularly called Mctaggart's paradox scholars have long assumed that Mctaggart's argument stands alone and does not rely on any contentious ontological principles the author demonstrates that these assumptions are incorrect Mctaggart himself explicitly claimed his argument to be dependent on the ontological principles that form the basis of his idealist metaphysics the result is that scholars have proceeded to understand the argument on the basis of their own metaphysical assumptions duly arriving at very different interpretations this book offers an alternative reading of Mctaggart's argument and at the same time explains why other commentators arrive at their mutually incompatible interpretations it will be of interest to students and scholars with an interest in the philosophy of time and other areas of contemporary metaphysics

for centuries western science and many western cultures have taught us to think of ourselves as individuals but today a revolutionary new
understanding is emerging from the laboratories of the most cutting edge physicists biologists and psychologists what matters is not the isolated
entity but the space between things the relationship of things the bond by international bestselling author lynne mctaggart the bond is the
culmination of her groundbreaking work it offers a completely new scientific story of life and the human experience one that challenges the
very way we conceive of ourselves and our world the bond shows that the essential impulse of all life is a will to connect rather than a drive to
compete in fact we are inescapably connected hardwired to each other at our most elemental level from cells to whole societies the desire to help
others is so necessary that we experience it as one of our chief pleasures as essential as eating and having sex and we succeed and prosper only
when we see ourselves as part of a greater whole every conflict that occurs whether between husband and wife social or racial groups or nations
is resolved only when we can fully see and embrace the space the bond between us mctaggart offers detailed recommendations to help foster
more holistic thinking more cooperative relationships and more unified social groups blending interviews and human stories into an absorbing
narrative she shows how a simple daily practice conditions the brain to enable you to become more empathetic toward others a new way of
speaking and listening can overcome polarization helping the staunchest of enemies to become close friends people who fire together wire
together whenever a group works together for a common goal the brains of all parties begin to get on the same wavelength strengthening the
bond within the group fairness is more powerful than unfairness a small group of individuals committed to strong reciprocity can invade a
population of self interested individuals and create a fairer society the bond offers a breathtaking visionary plan for a new way to live in harmony
with our true nature and with each other and a new way to heal our relationships our neighborhoods and our world

C. D. Broad's writing on various philosophical issues spans more than half a century rather than attempt to trace the development of his thought throughout these fifty years this book considers his most representative work namely the mind and its place in nature nor does the scope of this study encompass the whole of that book but only some of the issues he discusses in it specifically Oaklander considers what Broad has to say about such fundamental issues as substance universals relations space time and intentionality in the contexts of perception memory and introspection.

Nathan Oaklander studied philosophy at the University of Iowa he is a student of Gustav Bergmann one of the most distinguished ontologist in 20th century philosophy.
