full of valuable insights to guide you will smith thoughtful and life affirming a must read tony robbins this book will put you back in charge of your own life tom brady a new perspective on the overused and misunderstood concept of karma that offers the key to happiness and enlightenment from the world renowned spiritual master sadhguru what is karma most people understand karma as a balance sheet of good and bad deeds virtues and sins that the decrees that we cannot evade the consequences of our own actions in reality karma has nothing to do with reward and punishment karma simply means action your action your responsibility it isn’t some external system of crime and punishment but an internal cycle generated by you accumulation of karma is determined only by your intent the one way you respond to what is happening to you over time it’s possible to become ensnared by your own unconscious patterns of behavior in karma sadhguru seeks to put you back in the driver’s seat turning you from a terror struck passenger to a confident driver navigating the course of your own destiny by living consciously and fully inhabiting each moment you can free yourself from the cycle karma is an exploration and a manual restoring our understanding of karma to its original potential for freedom and empowerment instead of a source of entanglement through sadhguru’s teachings you will learn how to live intelligently and joyfully in a challenging world the supreme way is not difficult if only you do not pick and choose neither love nor hate and you will clearly understand be off by a hair and patriarch seng ts’ an the hsin hsin ming is a masterpiece of economy expressing the profoundest truth of the enlightened mind in only a few short pages master sheng yens approach is unique among commentaries on the text he views it as a supremely useful and practical guide to meditation practice i do not adopt a scholarly point of view or analytical approach he says rather i use the poem as a taking off point to inspire the practitioner and deal with issues that arise during the course of practice true faith in mind is the belief grounded in realization that we have a fundamental unmoving and unchanging mind this mind is precisely buddha mind in your children are very greatly in danger the veteran journalist justin murphy makes the compelling argument that the educational disparities in rochester new york are the result of historical and present day educational policy that will never be dismantled alone education in the urban areas is a city city cities such as rochester must first dismantle segregation drawing on never before seen archival documents as well as scores of new interviews murphy shows how discriminatory public policy and personal prejudice combined to create the racially segregated education system that exists in the rochester area today alongside this dismal history murphy recounts the courageous fight for integration and equality from the advocacy of frederick douglass in the 1850s to a countywide student coalition inspired by the black lives matter movement in the 2010s this grinding antagonism featuring numerous failed efforts to uphold the promise of brown v board of education underlines that desegregation and integration offer the greatest opportunity to improve educational and economic outcomes for children of color in the united states to date that opportunity has been lost in rochester persistent poor academic outcomes have been one terrible result your children are very greatly in danger is a history of rochester with clear relevance for today the struggle for equity in rochester like in many northern cities shows how the burden of history lies on the present a better future for these cities requires grappling with their the matsim multi agent transport simulation software project was started around 2006 with the goal of generating traffic and congestion patterns by following individual synthetic travelers through their daily or weekly activity programme it has since then evolved from a collection of stand alone c programs to an integrated java based framework which is publicly hosted on source available automatically regression tested it is currently used by about 40 groups throughout the world this book takes stock of the current status the first part of the book gives an introduction to the most important concepts with the intention of enabling a potential user to set up and run basic simulations the second part of the book describes how the basic functionality can be extended for example by adding schedule based public transit electric or autonomous cars paratransit or within day replanning for each extension the text provides pointers to the additional documentation and to the code base it is also discussed how people with appropriate java programming skills can write their own extensions and plug them into the matsim core the project has started from the basic idea that traffic is a consequence of human behavior and thus humans and their behavior should be the starting point of all modelling and with the intuition that when simulations with 100 million particles are possible in computational physics then behavior oriented simulations with 10 million travelers should be possible in travel behavior research the initial implementations thus combined concepts from computational physics and complex adaptive systems with concepts from travel behavior research the third part of the book looks at theoretical concepts that are able to describe important aspects of the simulation system for example under certain conditions the code becomes a monte carlo engine sampling from a discrete choice model another important aspect is the interpretation of the matsim score as utility in the microeconomic sense opening up a connection to benefit cost analysis finally the book collects use cases as they have been undertaken with matsim the book users are invited to submit their work and many followed with sometimes crisp and short and sometimes longer contributions always with pointers to additional references we hope that the book will become an invitation to explore to build and to extend agent based modeling of travel behavior from the stable and well tested core of matsim documented here

This edition of verified synthesis of zeolitic materials contains all the recipes from the first edition plus 24 new recipes. Five new introductory articles have been included plus those from the first edition, some of which have been substantially revised. The xrd patterns have been recorded using different instrument settings from those in the first edition and are intended to conform to typical x-ray diffraction practice in most cases. Only the xrd patterns for the products synthesised are printed here, the exceptions are those phases which show marked changes in the xrd pattern upon calcination.
