Complemented by early childhood programs, economic development benefits can play an important role in motivating a grassroots movement for investing in our kids. Decades of research have demonstrated that the parent-child dyad and the environment of the family—a which includes all primary caregivers—are at the foundation of children’s well-being and healthy development from birth. Children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life when a child’s brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves; for instance, parenting can enrich and give focus to parents’ lives, generate stress or calm and create any number of emotions including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments: these include a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Matters identifies parenting knowledge, attitudes, and practices associated with...
positive developmental outcomes in children ages 0-8. Universal preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy research and practice in the United States. It may take a village to raise a child, but most American families are struggling with diminishing social support to do the job on their own while parents work longer hours for less, and the costs of childcare, healthcare, and college skyrocket. The share of the U.S. budget spent on kids has fallen 22 percent since 1960. More and more children may well not make it to a healthy, productive adulthood. That’s terrible for them and for us as well. It doesn’t have to be this way. In this book, renowned expert David L. Kirp clarifies the importance of investing wisely in children. He outlines a visionary kids first policy agenda that’s guided by a golden rule principle: every child deserves what’s good enough for a child you love, and he offers lively and inspiring on-the-ground accounts of five big cradle-to-college initiatives that can change the arc of all children’s lives. Strong support for parents, high-quality early.

and recommendations about improving systems to better align with our understanding of the significant impact of health equity. How we raise young children is one of today’s most highly personalized and sharply politicized issues in part because each of us can claim some level of expertise. The debate has intensified as discoveries about our development in the womb and in the first months and years have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature versus nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care issues of racial and ethnic diversity, the integration of children’s cognitive and emotional development, and more authoritative yet accessible from neurons to neighborhoods presents the evidence about brain wiring and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate, family, child care community within which the child grows. The long-awaited new edition of NAEYC’s book Developmentally Appropriate Practice in Early Childhood Programs is here, fully revised and updated since the first edition in 1987. It has been an essential resource for the early childhood education field. Early childhood educators have a professional responsibility to plan and implement intentional developmentally appropriate practice.

This book is a call to arms when we are at a crucial moment and perhaps on the verge of a missed opportunity. We now have the means and the will to have universal pre-kindergarten, but we are also in grave danger of not getting it right. If only given 30 minutes to face the children, what can you do? Ask Jim Trelease, and he will tell you to read with his loud voice. Reading aloud not only serves as a source of information and imagination, but it can also strengthen the bond between parents and children. The techniques of reading aloud (read loud) have been proven to improve reading, writing, speaking, and listening skills, as well as increase children’s enthusiasm for learning. For more than three decades, this book has helped parents, teachers, and children to discover the joy of reading and make it a lifelong habit. The revised edition now includes the latest research, including digital learning that is aligned with current technology. Dr. Dana Suskind returns with a new look at the neuroscience of early childhood development and how it can guide us towards a future in which every child has the opportunity to fulfill their potential. Her prescription for this more prosperous and equitable future is clear: more robust support for parents during the most
critical years of their children’s development in her poignant new book *Parent Nation* written with award-winning science writer Lydia Denworth, Dr. Suskind helps parents recognize both their collective identity and their formidable power as custodians of our next generation. Weaving together the latest science on the developing brain with heart-wrenching and relatable stories of families from all walks of life, Dr. Suskind shows that the status quo scores of parents convinced they should be able to shoulder the enormous responsibility of early childhood care and education on their own is not only unsustainable but deeply detrimental to the wellbeing of children, families, and society. Anyone looking for a blueprint for how to build a brighter future for our children will find one in *Parent Nation*, informed by the science of foundational brain development as well as history, political science, and the lived experiences of families around the country. This book clearly outlines how society can and should help families meet the developmental needs of their children only then can we ensure that all children are able to enjoy the promise of their potential. How does a rainbow form? What causes it to snow? What makes the wind blow? This adorable reference book introduces young children to every aspect of weather and answers the questions curious kids want to know. Always an important topic for young kids, they’ll learn how all the various types of weather systems work, from droughts and deserts to snowflakes and blizzards. Stories are accompanied by 100 colorful photos that capture the awe and wonder of our natural world. This charming book is sure to

Expert Alice Sterling Honig this guidebook helps readers address the most common causes of stress in a young child's life including separation anxiety, bullying, jealousy, and family circumstances. Educators and childcare providers will understand key factors that influence a child's stress level and choose from a wide range of stress-busting techniques. Personalize stress busters to meet the needs of individual children. Skillfully use stress-reducing strategies with groups of children from diverse backgrounds. Harness the power of storytelling to model solutions to problems and help children address negative feelings and avoid burnout by handling the stresses in their own adult lives. Memorable stories inspired by Dr. Honig's 30 years of experience show readers how these stress busters can make a real difference in children's lives. The questions at the end of each chapter are ideal aids for self-study or professional development courses. Packed with down-to-earth, easy-to-use ideas, this empowering book gives professionals the tools they need to conquer stress in any early childhood setting so children can develop the early social and academic skills they'll need to succeed in school. Clearly, babies come into the world remarkably receptive to its wonders. Their alertness to sights, sounds, and even abstract concepts makes them inquisitive explorers and learners every waking minute. Well before formal schooling begins, children's early experiences lay the foundations for their later social behavior, emotional regulation, and literacy. this book presents arguments for the following propositions local economic development strategies in the united states should include extensive
investments in high quality early childhood programs such as prekindergarten pre k education child care and parenting assistance economic development policies should also include reforms in business tax incentives but economic development benefits higher earnings per capita in the local community can be better achieved if business incentives are complemented by early childhood programs economic development benefits can play an important role in motivating a grassroots movement for investing in our kids

Parenting Matters

2016-11-21

decades of research have demonstrated that the parent child dyad and the environment of the family which includes all primary caregivers are at the foundation of children s well being and healthy development from birth children are learning and rely on parents and the other caregivers in their lives to protect and care for them the impact of parents may never be greater than during the earliest years of life when a child s brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment parents help children build and refine their knowledge and skills charting a trajectory for their health and well being during childhood and beyond the experience of parenting also
impacts parents themselves for instance parenting can enrich and give focus to parents lives generate stress or calm and create any number of emotions including feelings of happiness sadness fulfillment and anger parenting of young children today takes place in the context of significant ongoing developments these include a rapidly growing body of science on early childhood increases in funding for programs and services for families changing demographics of the u s population and greater diversity of family structure additionally parenting is increasingly being shaped by technology and increased access to information about parenting parenting matters identifies parenting knowledge attitudes and practices associated with positive developmental outcomes in children ages 0 8 universal preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge attitudes and practices and barriers to and facilitators for parents use of practices that lead to healthy child outcomes as well as their participation in effective programs and services this report makes recommendations directed at an array of stakeholders for promoting the wide scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice it is meant to serve as a roadmap for the future of parenting policy research and practice in the united states
Kids First

2011-03-01

It may take a village to raise a child but most American families are struggling with diminishing social support to do the job on their own while parents work longer hours for less and the costs of childcare, healthcare, and college skyrocket. The share of the U.S. budget spent on kids has fallen 22 percent since 1960. More and more children may well not make it to a healthy productive adulthood; that’s terrible for them and for us as well. It doesn’t have to be this way. In this book, renowned expert David L. Kirp clarifies the importance of investing wisely in children. He outlines a visionary kids first policy agenda that’s guided by a golden rule principle: every child deserves what’s good enough for a child you love. And he offers lively and inspiring on-the-ground accounts of five big cradle to college initiatives that can change the arc of all children’s lives. Strong support for parents, high-quality early education, linking schools and communities to improve what both offer children, giving all youngsters access to a caring and stable adult mentor and providing kids a nest egg to help pay for college or kick-start a career.

Vibrant and Healthy Kids
2019-12-27

children are the foundation of the United States and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development. well-being and long-term outcomes. Despite substantial scientific evidence about how those adversities contribute to poor health advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood.
vibrant and healthy kids aligning science practice and policy to advance health equity builds upon and updates research from communities in action pathways to health equity 2017 and from neurons to neighborhoods the science of early childhood development 2000 this report provides a brief overview of stressors that affect childhood development and health a framework for applying current brain and development science to the real world a roadmap for implementing tailored interventions and recommendations about improving systems to better align with our understanding of the significant impact of health equity

From Neurons to Neighborhoods

how we raise young children is one of today's most highly personalized and sharply politicized issues in part because each of us can claim some level of expertise the debate has intensified as discoveries about our development in the womb and in the first months and years have reached the popular media how can we use our burgeoning knowledge to assure the well being of all young children for their own sake as well as for the sake of our nation drawing from new findings this book presents important conclusions about nature versus nurture the impact of being born into a working family the effect of
politics on programs for children the costs and benefits of intervention and other issues the committee issues a series of challenges to decision makers regarding the quality of child care issues of racial and ethnic diversity the integration of children's cognitive and emotional development and more authoritative yet accessible from neurons to neighborhoods presents the evidence about brain wiring and how kids learn to speak think and regulate their behavior it examines the effect of the climate family child care community within which the child grows

**Developmentally Appropriate Practice in Early Childhood Programs Serving Children from Birth Through Age 8, Fourth Edition (Fully Revised and Updated)**

2021-08

the long awaited new edition of naeyc's book developmentally appropriate practice in early childhood programs is here fully revised and updated since the first edition in 1987 it has been an essential resource for the early childhood education field early childhood educators have a professional
responsibility to plan and implement intentional developmentally appropriate learning experiences that promote the social and emotional development, physical development and health, cognitive development and general learning competencies of each child served. But what is developmentally appropriate practice (DAP)? DAP is a framework designed to promote young children’s optimal learning and development through a strengths-based approach to joyful engaged learning. As educators make decisions to support each child’s learning and development, they consider what they know about:

1. **Commonality in children’s development and learning**
2. **Each child as an individual within the context of their family and community**
3. **Everything discernible about the social and cultural contexts for each child, each educator, and the program as a whole.**

This latest edition of the book is fully revised to underscore the critical role social and cultural contexts play in child development and learning, including new research about implicit bias and teachers' own context and consideration of advances in neuroscience. Educators implement developmentally appropriate practice by recognizing the many assets all young children bring to the early learning program as individuals and as members of families and communities. They also develop an awareness of their own context, building on each child’s strengths. Educators design and implement learning settings to help each child achieve their full potential across all domains of development and across all content areas.

instant new york times wall street journal and usa today bestseller world
Class pediatric surgeon social scientist and best selling author of thirty million words Dr Dana Suskind returns with a revelatory new look at the neuroscience of early childhood development and how it can guide us toward a future in which every child has the opportunity to fulfill their potential. Her prescription for this more prosperous and equitable future as clear as it is powerful is more robust support for parents during the most critical years of their children’s development in her poignant new book *Parent Nation* written with award-winning science writer Lydia Denworth. Dr Suskind helps parents recognize both their collective identity and their formidable power as custodians of our next generation. Weaving together the latest science on the developing brain with heart-breaking and relatable stories of families from all walks of life, Dr Suskind shows that the status quo scores of parents convinced they should be able to shoulder the enormous responsibility of early childhood care and education on their own is not only unsustainable but deeply detrimental to the wellbeing of children, families, and society. Anyone looking for a blueprint for how to build a brighter future for our children will find one in *Parent Nation*. Informed by the science of foundational brain development as well as history, political science, and the lived experiences of families around the country, this book clearly outlines how society can and should help families meet the developmental needs of their children only then can we ensure that all children are able to enjoy the promise of their potential.

Transforming the Financing of Early Care and Education

2018-08-17

high quality early care and education for children from birth to kindergarten entry is critical to positive child development and has the potential to generate economic returns which benefit not only children and their families but society at large despite the great promise of early care and education it has been financed in such a way that high quality early care and education have only been available to a fraction of the families needing and desiring it and does little to further develop the early care and education ece workforce it is neither sustainable nor adequate to provide the quality of care and learning that children and families needâ a shortfall that further perpetuates and drives inequality transforming the financing of early care and education outlines a framework for a funding strategy that will provide reliable accessible high quality early care and education for young children from birth to kindergarten entry including a highly qualified and adequately compensated workforce that is consistent with the vision outlined in the 2015
report transforming the workforce for children birth through age 8 a unifying foundation the recommendations of this report are based on essential features of child development and early learning and on principles for high quality professional practice at the levels of individual practitioners practice environments leadership systems policies and resource allocation

Giving Kids a Fair Chance

current social and education policies directed toward children focus on improving cognition yet success in life requires more than smarts heckman calls for a refocus of social policy toward early childhood interventions designed to enhance both cognitive abilities and such non cognitive skills as confidence and perseverance this new focus on preschool intervention would emphasize improving the early environments of disadvantaged children and increasing the quality of parenting while respecting the primacy of the family and america’s cultural diversity heckman shows that acting early has much greater positive economic and social impact than later interventions which range from reduced pupil teacher ratios to adult literacy programs to expenditures on police that draw the most attention in the public policy debate at a time when state and local budgets for early interventions are
being cut heckman issues an urgent call for action and offers some practical steps for how to design and pay for new programs

research shows that stress in the crucial early years of a child’s life can pose dramatic lasting challenges to development learning and behaviour. This is the practical book early childhood professionals need to recognize stress in young children and intervene with proven relief strategies before pressures turn into big problems. Developed by celebrated early childhood expert Alice Sterling Honig, this guidebook helps readers address the most common causes of stress in a young child’s life, including separation anxiety, bullying, jealousy, and family circumstances. Educators and childcare providers will understand key factors that influence a child’s stress level. Choose from a wide range of stress-busting techniques and personalize stress busters to meet the needs of individual children. Skillfully use stress-reducing strategies with groups of children from diverse backgrounds. Harness the power of storytelling to model solutions to problems and help children address negative feelings and avoid burnout by handling the stresses in their own adult lives. Memorable stories inspired by Dr. Honig’s 30 years of experience show readers how these stress busters can make a real difference in children’s lives. The questions at the end of each chapter are ideal aids for self-study or professional development courses. Packed with down-to-earth, easy-to
use ideas this empowering book gives professionals the tools they need to conquer stress in any early childhood setting so children can develop the early social and academic skills they'll need to succeed in school

schools today are in the midst of the most major costly educational reform
movement in their history as they grapple with the federal mandates to leave no children behind says author susan b neuman former assistant secretary for elementary and secondary education under president george w bush although some efforts for investing resources will be substantially more productive than others there is little evidence that despite many heroic attempts to beat the odds any of these efforts will close more than a fraction of the differences in achievement for poor minority children and their middleclass peers as neuman explains in this insightful revealing book schools will fail not due to the soft bigotry of low expectations but because there are multitudes of children growing up in circumstances that make them highly vulnerable children who come to school from dramatically unequal circumstances leave school with similarly unequal skills and abilities in these pages however neuman shows how the odds can be changed how we can break the cycle of poverty and disadvantage for children at risk after laying the critical groundwork for the need for change excessive waste with little effect this book provides a vivid portrait of changing the odds for high poverty children describing how previous reforms have missed the mark it offers a framework based on seven essential principles for implementing more effective programs and policies building on successes while being fiscally responsible is a message that has been shown to have wide bipartisan appeal embraced by both liberals and conservatives following neuman s essential principles chapters describe programs for changing the odds for children when
the cognitive gaps are beginning to form in these earliest years of their lives in a highly readable style neuman highlights programs that are making a difference in children’s lives across the country weaving together narratives that tell a compelling story of hope and promise for our most disadvantaged children
