provides a new basis for the investigation of past and present modern social processes and contexts of subjection. Denise Ferreira da Silva is Associate Professor of Ethnic Studies at University of California San Diego. Using a model of the civilizational construction of science, the author views science without eurocentric blinders. She shows how science was built by transfers from non-European groups and why the historiography of science has to be rethought. Publisher description: Asian science such as mathematics, Chinese printing, gunpowder, and the compass all contributed to the development of European science during the last few centuries. However, scientific contributions with Asian roots have diminished and been marginalized and deligitimised. Yet the center of the world economy today is shifting to Asia, with shifts in science and technology bound to follow. Toward a global science is driven by the proposition that pre-Renaissance acquisition of Asian knowledge did not exhaust Asian civilization’s potential contribution. There are many useful elements to modern science still lying hidden in Asian civilizational stores waiting to be Œmined. Œ The author gives details of recent contributions from South Asian medicine, mathematics, and psychology, and explores how South Asian inputs can be useful in navigating the philosophical and ethical problems raised by two dominant technologies of the future: namely, biotechnology and information technology. As an illustrative example, it describes how a fruitful marriage of one technology—virtual reality—with South Asian philosophy can enliven both the technology as well as philosophy. It also examines how Asian positions could be used to feed some key contemporary philosophical discussions on science. Using a model of the civilizational construction of science, the book views science without eurocentric blinders. It documents how science was built initially by transfers from non-European civilizations and why the given historiography of science has to be rethought. Throughout the book, the author gives examples of Œparallels and antecedentsÓ between East and West in science and estimates the potential reservoir of Asian knowledge in each field. The book also deals with the many knotty problems in recovering science from past traditions. The author distinguishes between his secular efforts from religious and other attempts that claim the equivalence of all knowledge systems. Other parts of the world, the internationalization of the study of history is reaching a new quality. Karl Dietrich Erdmann’s book was first published in German in 1987; it has been translated, updated, and edited for an international audience of the twenty-first century. This volume showcases new research on the global reach of Latin American revolutionary movements during the height of the cold war, mapping out the region’s little-known connections with Africa, Asia, and Europe. Toward a global history of Latin America’s revolutionary left offers insights into the effect of international collaboration on the identities, ideologies, strategies, and survival of organizers and groups. Featuring contributions from historians working in six different countries, this collection includes chapters on Cuba’s hosting of the 1966 Tricontinental Conference that brought revolutionary movements together, Czechoslovakian intelligence’s logistical support for revolutionaries, the Brazilian left’s search for recognition in Cuba and China, the central role played by European publishing houses in disseminating news from Latin America, Italian support for Brazilian guerrilla insurgents, Spanish ties with Nicaragua’s revolution, and the solidarity of European networks with Guatemala’s guerrilla army of the poor. Through its expansive geographical perspectives, this volume positions Latin America as a significant force on the international stage of the 1960s and 70s. It sets a new research agenda that will guide future study on leftist movements, transnational networks, and cold war history in the region on the premise that words have the power to make worlds. Each essay in this book follows a word as it travels around the globe and across time. Scholars from five disciplines address thirteen societies to highlight the social and political life of words in Asia, Europe, and the Middle East. From the mid-nineteenth century to the present, the approach is consciously experimental in that rigorously tracking specific words in specific settings frequently leads in unexpected directions and alters conventional depictions of global modernity. Words such as security in Brazil, responsibility in Japan, community in Thailand, and hijāb in France changed the societies in which they moved, even as the words were changed by them. Some words threatened to launch wars as injury did in imperial Britain’s relations with China in the nineteenth century. Others such as secularism worked in silence to agitate for political change in twentieth-century Morocco. Words imposed or imported from abroad could be transformed by those who wielded them to oppose the very powers that first introduced them. As happened in Turkey.
Indonesia and the Philippines taken together, this selection of fourteen essays reveals commonality as well as distinctiveness across modern societies making the world look different from the interdisciplinary and transnational perspective of words in motion. Equal justice under law is one of America's most proudly proclaimed and widely violated legal principles, but it comes nowhere close to describing the legal system in practice. Millions of Americans lack any access to justice, let alone equal access. Worse, the increasing centrality of law in American life and its growing complexity has made access to legal assistance critical for all citizens. Yet according to most estimates, about four-fifths of the legal needs of the poor and two to three-fifths of the needs of middle-income individuals remain unmet. This book reveals the inequities of legal assistance in America from the lack of access to educational services and health benefits to gross injustices in the criminal defense system. It proposes a specific agenda for change, offering tangible reforms for coordinating comprehensive systems for the delivery of legal services, maximizing individual's opportunities to represent themselves, and making effective legal services more affordable for all Americans who need them. This book expands and deepens the analysis of a new approach to the study of international relations in a changing global system. Elaborating the essential characteristics of the anarchic structure of the world polity, the greatest political debate of our time is about the blind rush towards a single global economy. Its consequences for jobs, democracy, human well-being, and cultural diversity, and its impact on the natural world that sustains us, its effects will be profound and irreversible, but globalization itself is not inevitable. In the case against the global economy, 24 leading economic, agricultural, cultural, and environmental authorities drawn from across the world argue that free trade and economic globalization are producing exactly the opposite results to those promised from a detailed analysis of the new global economy's structures and its full social and ecological implications. They show how it is undermining our liberty, our security, and our well-being and is devasting the planet. Catastrophes it seems are becoming more frequent in the twenty-first century according to UN statistics: Every year, approximately two hundred million people are directly affected by natural disasters.
disasters seven times the number of people who are affected by war
discussions about global warming and fatal disasters such as katrina and
the tsunami of 2004 have heightened our awareness of natural disasters
and of their impact on both local and global communities hollywood has
also produced numerous disaster movies in recent years some of which
have become blockbusters this volume demonstrates that natural
catastrophes earthquakes hurricanes floods etc have exercised a vast
impact on humans throughout history and in almost every part of the
world it argues that human attitudes toward catastrophes have changed
over time surprisingly this has not necessarily led to a reduction of
exposure or risk the organization of the book resembles a journey around
the globe from europe to north africa the middle east and asia and from
the pacific through south america and mexico to the united states while
natural disasters appear everywhere on the globe different cultures
societies and nations have adopted specific styles for coping with
disaster indeed how humans deal with catastrophes depends largely on
social and cultural patterns values religious belief systems political
institutions and economic structures the roles that catastrophes play in
society and the meanings they are given vary from one region to the
next they differ and this is one of the principal arguments of this book
from one cultural political and geographic space to the next the essays
collected here help us to understand not only how people in different
times throughout history have learned to cope with disaster but also how
humans in different parts of the world have developed specific cultural
social and technological strategies for doing so the untold story of the
greatest library of the renaissance and its creator hernando colón this
engaging book offers the first comprehensive account of the
extraordinary projects of hernando colón son of christopher columbus
which culminated in the creation of the greatest library of the
renaissance with ambitions to be universal that is to bring together
copies of every book on every subject and in every language pérez
fernández and wilson lee situate hernando s projects within the rapidly
changing landscape of early modern knowledge providing a concise
history of the collection of information and the origins of public libraries
examining the challenges he faced and the solutions he devised the two
authors combine meticulous research with deep and original thought
shedding light on the history of libraries and the organization of

Global city toward a more explicit engagement with the politics of this global urban imagination the global commonwealth of citizens critically examines the prospects for cosmopolitan democracy as a viable and humane response to the challenges of globalization arising after the collapse of the Soviet Union and the decisive affirmation of Western-style democracy. Cosmopolitan democracy envisions a world politics in which democratic participation by citizens is not constrained by national borders and where democracy spreads through dialogue and incentives, not coercion and war. This is an incisive and thought-provoking book by one of the world's leading proponents of cosmopolitan democracy. Daniele Archibugi looks at all aspects of cosmopolitan democracy in theory and practice is democracy beyond nation states feasible? Is it possible to inform global governance with democratic norms and values and if so how? Archibugi carefully answers questions like these and forcefully responds to skeptics and critics. He argues that democracy can be extended to the global political arena by strengthening and reforming existing international organizations and creating new ones and he calls for dramatic changes in the foreign policies of nations to make them compatible with global public interests. Archibugi advocates giving voice to new global players such as social movements, cultural communities, and minorities. He proposes building institutional channels across borders to address common problems and encourages democratic governance at the local, national, regional, and global levels. The global commonwealth of citizens is an accessible introduction to the subject that will be of interest to students and scholars in political science, international relations, international law, and human rights. This book contends that the forces of late modernism are being caught between a capital-driven globalization and a territorially rooted revival of tribalism and ultra-nationalism. Its critical focus is on global structures that are producing new patterns of North-South and rich-poor domination as well as exerting dangerous pressures on the carrying capacities of the planet. Richard Falk argues that any hopeful response to these threatening developments requires the fundamental revision of such basic ideas as sovereignty, democracy, and security. These organizing conceptions of political life are being reshaped during this era of transition from a state-centric world of geopolitics to a more centrally guided world of geogovernance he contends that geogovernance will have adverse consequences for the human condition unless it can be mainly constructed by transnational democratic forces.

In his memoir Towards a Better World, Helleiner recounts his profound trip to Africa—a trip that propelled him into a career devoted to the research, advice, and teaching of economic development and the reduction of global poverty. What was once the factory is now the university. We started off with this apparently straightforward affirmation not in order to assume it but to question it to open it radically, rethinking it towards theoretical and political research. University corporatization and the rise of a global university are not unilateral impositions or developments completely contained by capitalist rationality. Rather they are the result of a temporary and thus reversible cycle of struggles. The problem is to transform the field of tension delineated by the processes analyzed in this book into specific forms of resistance and the organization of escape routes. This is Edu Factory's starting point and objective. Its style and its method the final writings of Samir Amin—a mix of personal experiences and theoretical analysis of global challenges and movements. In this second volume of his memoirs, Amin takes us on a journey to a dizzying array of countries recounting the stages of his ongoing dialogue over several decades with popular movements struggling for a better future. As in his many works over the years, the Long Revolution of the Global South combines Amin's astute theoretical analyses of the challenges confronting the world's oppressed peoples with militant action. In these final writings, based on his life, Amin presents us with theoretical interventions, analyses of political conjunctures, and narration of personal experiences. Amin's reminiscences of travels to places too often overlooked by the world at large are a joy to read. We even catch a glimpse of some of his memorable and sometimes not so memorable culinary adventures through a collaboration among twenty legal scholars from North America, Europe, and Asia.

on the premise that words have the power to make worlds each essay in this book follows a word as it travels around the globe and across time scholars from five disciplines address thirteen societies to highlight the social and political life of words in asia europe and the middle east from the mid nineteenth century to the present the approach is consciously experimental in that rigorously tracking specific words in specific settings frequently leads in unexpected directions and alters conventional depictions of global modernity such words as security in brazil responsibility in japan community in thailand and hijāb in france changed the societies in which they moved even as
the words were changed by them some words threatened to launch wars as injury did in imperial britain’s relations with china in the nineteenth century others such as secularism worked in silence to agitate for political change in twentieth century morrocco words imposed or imported from abroad could be transformed by those who wielded them to oppose the very powers that first introduced them as happened in turkey indonesia and the philippines taken together this selection of fourteen essays reveals commonality as well as distinctiveness across modern societies making the world look different from the interdisciplinary and transnational perspective of words in motion contributors mona abaza itty abraham partha chatterjee carol gluck huri islamoglu claudia koonz lydia h liu driss maghraoui vicente l rafael craig j reynolds seteney shami alan tansman kasian tejapira anna lowenhaupt tsing

Access to Justice 2018-02-19 equal justice under law is one of america s most proudly proclaimed and widely violated legal principles but it comes nowhere close to describing the legal system in practice millions of americans lack any access to justice let alone equal access worse the increasing centrality of law in american life and its growing complexity has made access to legal assistance critical for all citizens yet according to most estimates about four fifths of the legal needs of the poor and two to three fifths of the needs of middle income individuals remain unmet this book reveals the inequities of legal assistance in america from the lack of access to educational services and health benefits to gross injustices in the criminal defense system it proposes a specific agenda for change offering tangible reforms for coordinating comprehensive systems for the delivery of legal services maximizing individual s opportunities to represent themselves and making effective legal services more affordable for all americans who need them

International Relations In A Changing Global System 2001 this book expands and deepens the analysis of a new approach to the study of international relations in a changing global system elaborating the essential characteristics of the anarchic structure of the world polity The Case Against the Global Economy 2009-03-16 the greatest political debate of our time is about the blind rush towards a single global economy its consequences for jobs democracy human well being and cultural diversity and its impact on the natural world that sustains us its effects will be profound and irreversible but globalization itself is not inevitable in the case against the global economy 24 leading economic
agricultural, cultural, and environmental authorities drawn from across the world argue that free trade and economic globalization are producing exactly the opposite results to those promised from a detailed analysis of the new global economy its structures and its full social and ecological implications they show how it is undermining our liberty our security and our well being and is devastating the planet

**Natural Disasters, Cultural Responses** 2021-01-26 catastrophes it seems are becoming more frequent in the twenty first century according to un statistics every year approximately two hundred million people are directly affected by natural disasters seven times the number of people who are affected by war discussions about global warming and fatal disasters such as katrina and the tsunami of 2004 have heightened our awareness of natural disasters and of their impact on both local and global communities hollywood has also produced numerous disaster movies in recent years some of which have become blockbusters this volume demonstrates that natural catastrophes earthquakes hurricanes floods etc have exercised a vast impact on humans throughout history and in almost every part of the world it argues that human attitudes toward catastrophes have changed over time surprisingly this has not necessarily led to a reduction of exposure or risk the organization of the book resembles a journey around the globe from europe to north africa the middle east and asia and from the pacific through south america and mexico to the united states while natural disasters appear everywhere on the globe different cultures societies and nations have adopted specific styles for coping with disaster indeed how humans deal with catastrophes depends largely on social and cultural patterns values religious belief systems political institutions and economic structures the roles that catastrophes play in society and the meanings they are given vary from one region to the next they differ and this is one of the principal arguments of this book from one cultural political and geographic space to the next the essays collected here help us to understand not only how people in different times throughout history have learned to cope with disaster but also how humans in different parts of the world have developed specific cultural social and technological strategies for doing so

where they are located in the world communities living in mountain regions have shared experiences defined in large part by contradictions these communities often face social and economic marginalization despite providing the lumber coal minerals tea and tobacco that have fueled the growth of nations for centuries they are perceived as remote and socially inferior backwaters on one hand while simultaneously seen as culturally rich and spiritually sacred spaces on the other these contradictions become even more fraught as environmental changes and political strains place added pressure on these mountain communities shifting national borders and changes to watersheds forests and natural resources play an increasingly important role as nations respond to the needs of a global economy the works in this volume consider multiple nations languages generations and religions in their exploration of upland communities responses to the unique challenges and opportunities they share from paintings to digital mapping environmental studies to poetry land reclamation efforts to song lyrics the collection provides a truly interdisciplinary and global study the editors and authors offer a cross cultural exploration of the many strategies that mountain communities are employing to face the concerns of the future

Global Mountain Regions 2011-12-01 universities and nations have long recognized the direct contribution of graduate education to the welfare of the economy by meeting a range of research and employment needs with the burgeoning of a global economy in the twentieth and twenty first centuries the economic outcome of doctoral education reaches far beyond national borders many doctoral programs in the united states and throughout the world are looking for opportunities to equip students to work in transnational settings with scientists and researchers located across the globe nations competing within this global economy often have different and not always compatible motives for supporting graduate training in this volume graduate education experts explore some of the tensions and potential for cooperation between nations in the realm of doctoral education the contributors assess graduate education in different systems around the world including australia brazil canada germany india japan mexico the nordic countries south africa the united kingdom and the united states many factors motivate the need for a global understanding of doctoral education including the internationalization of the labor market and global competition the expansion of opportunities for doctoral education in smaller and
developing nations and a declining interest among international students in pursuing their graduate education in the United States.

*Toward a Global PhD?* 2022-01-15 in *How to Build a Global City* Michele Acuto considers the rise of a new generation of so-called global cities: Singapore, Sydney, and Dubai and the power that this concept had in their ascent in order to analyze the general relationship between global city theory and its urban public policy practice. The global city is often invoked in theory and practice as an ideal model of development and a logic of internationalization for cities the world over, but the global city also creates deep social polarization and challenges how much local planning can achieve in a world economy. Presenting a unique elite ethnography of Singapore, Sydney, and Dubai, Acuto discusses the urban discourses, aspirations, and strategies vital to the planning and management of such metropolitan growth. The global city he shows is not one single idea but a complex of ways to imagine a place to be global and aspirations to make it so often deeply steeped in politics. His resulting book is a call to reconcile proponents and critics of the global city toward a more explicit engagement with the politics of this global urban imagination.

*How to Build a Global City* 2008-09-08 The global commonwealth of citizens critically examines the prospects for cosmopolitan democracy as a viable and humane response to the challenges of globalization arising after the collapse of the Soviet Union and the decisive affirmation of Western style democracy. Cosmopolitan democracy envisions a world politics in which democratic participation by citizens is not constrained by national borders and where democracy spreads through dialogue and incentives, not coercion and war. This is an incisive and thought-provoking book by one of the world’s leading proponents of cosmopolitan democracy. Daniele Archibugi looks at all aspects of cosmopolitan democracy in theory and practice: is democracy beyond nation states feasible? Is it possible to inform global governance with democratic norms and values? And if so, how? Archibugi carefully answers questions like these and forcefully responds to skeptics and critics. He argues that democracy can be extended to the global political arena by strengthening and reforming existing international organizations and creating new ones. He calls for dramatic changes in the foreign policies of nations to make them compatible with global public interests. Archibugi advocates giving voice to new global players such as social movements, cultural communities, and minorities. He proposes building institutional channels...
across borders to address common problems and encourages democratic governance at the local national regional and global levels the global commonwealth of citizens is an accessible introduction to the subject that will be of interest to students and scholars in political science international relations international law and human rights

The Global Commonwealth of Citizens 1995 this book contends that the forces of late modernism are being caught between a capital driven globalization and a territorially rooted revival of tribalism and ultra nationalism its critical focus is on global structures that are producing new patterns of north south and rich poor domination as well as exerting dangerous pressures on the carrying capacities of the planet richard falk argues that any hopeful response to these threatening developments requires the fundamental revision of such basic ideas as sovereignty democracy and security these organizing conceptions of political life are being reshaped during this era of transition from a state centric world of geopolitics to a more centrally guided world of geogovernance he contends that geogovernance will have adverse consequences for the human condition unless it can be mainly constructed by transnational democratic forces animated by a vision of humane governance this volume was written for the global civilization project of the world order models project womp an international group of scholars formed to think creatively about legal and political structures adequate to the needs of the modern world

On Humane Governance 2017-05-11 this book presents an alternative theory of globalization that derives not from the dominant perspective of the west from which this process emerged but from the critical vantage point of the third world which has borne the heaviest burdens of globalization it offers a critical and uniquely first hand perspective that is lacking not only from the apologists of western hegemony but from most scholars writing against this hegemony from within the globalizing world renowned throughout latin america and parts of europe the author brazilian geographer milton santos has long been for the most part inaccessible to the english speaking world only one of his books the shared space the two circuits of the urban economy in underdeveloped countries published in 1975 has been translated into english nevertheless the works of santos s most important phase from the 1980s until his death in 2001 have remained unavailable to english readers with the translation of toward an other globalization one of the last works
published in santos s lifetime this situation has finally been rectified in this book santos argues that we must consider globalization in three different senses globalization as a fable the world as globalizing agents make us believe as perversity the world as it is presently in the throes of globalization and as possibility the world as it could be what emerges from the analysis of these three senses is an alternative theory of globalization rooted in the perspective of the so called global south santos concludes his text with a message that is optimistic but in no way naïve what he offers instead is a revolutionary optimism and indeed an other globalization

**Global Population Health and Well-Being in the 21st Century**

2015 today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it despite that overwhelming majority though about half the population of rich countries like ours choose to believe the 2 percent and paradoxically this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades this disconnect has both climate scientists and activists scratching their heads growing anxious and responding usually by repeating more facts to win the argument but the more climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead is humanity up to the task it is a catch 22 that starts says psychologist and climate expert per espen stoknes from an inadequate understanding of the way most humans think act and live in the world around them with dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task
