Regarded by many as one of the greatest tanks ever built, the German Panther is probably the finest medium tank of the Second World War. And certainly the most numerous German Panzer in wartime service. With some 7,000 built, it combined firepower, armour protection, and mobility that was unmatched by any other tank of the period. In Panther Tank Enthusiasts Manual, Author Mark Healy looks at the development, construction, and fighting qualities of the Panther. As well as including insights into what it was like to operate and maintain. He focuses on surviving Panthers at the German Armour Museum in Munster. Panther Ausf. A and the later Panther Ausf. G at the Tank Museum Bovington as his centrepieces. And draws on a range of documentary and photographic information sources in Germany, the USA, and France.

John Schwaner of Sacramento Sky Ranch explains the piston aircraft engine with a practical day to day approach but directed towards the operator and repair personnel. Sky Ranch Engine Manual thoroughly covers the operation, inspection, and maintenance of the Lycoming and Continental piston aircraft engine including a very comprehensive troubleshooting guide. This book goes beyond the basic theory of aircraft reciprocating engines but instead focuses on the practical aspects for mechanics and operators of why things go bad, how to repair them, and most important how to keep them from failing in the first place.
the chieftain was the british army's main battle tank for twenty years first entering service with the 11th hussars in 1966 one of the first true main battle tanks it was designed to replace both medium centurion and heavy conqueror tanks in front line service and provided the backbone of the british army's heavy armour at the height of the cold war it incorporated a lot of revolutionary design features although some did not work as well as expected for example in order to reduce height the driver lay in a reclining position and changed gear with his foot the l11 120mm gun used a self combusting bagged charge instead of a brass cartridge case the gun proved to be highly successful and the tank was powered by a multi fuel engine the chieftain was continually upgraded during its service life later marks were fitted with a laser rangefinder a computerised fire control system ifcs thermal sights togs and additional compound armour on the front of the turret and around the driver's hatch so called stillbrew armour the l60 engine was continually modified and improved to increase its output and reliability the end result of all these changes was a formidable afv the chieftain hull was also used for a range of specialised afvs including armoured recovery vehicles arv and arrv bridge layers avlb and combat engineering tanks avre a total of more than 2,200 chieftains of all types were manufactured by the royal ordnance factories and vickers ltd some 900 of these served with the british army while the remaining 1,300 tanks were exported to iran, jordan, kuwait and the oman chieftains saw their share of combat with the iranian army in the 1980s when they engaged iraqi tanks during the iran iraq war while kuwaiti chieftains fought the iraqi army during the invasion of kuwait in 1990 chieftain gun tanks were withdrawn from front line service with the british army during the late 1980s and early 1990s but chieftain recovery and combat engineering vehicles served with the british army during the operations to liberate kuwait in 1991 desert storm.
