The Power of Words 2004-02-04

in 1888 mark twain reflected on the writer's special feel for words to his correspondent george bainton noting that the difference between the almost right word and the right word is really a large matter we recognize differences between a politician who is willful and one who is willing even though the difference does not cross word stems or parts of speech we recognize that being held up evokes different experiences depending upon whether its direct object is a meeting a bank or an example although we can notice hundreds of examples in the language where small differences in wording produce large reader effects the authors of the power of words argue that these examples are random glimpses of a hidden systematic knowledge that governs how we as writers or speakers learn to shape experience for other human beings over the past several years david kaufer and his colleagues have developed a software program for analyzing writing called docuscope this book illustrates the concepts and rhetorical theory behind the software analysis examining patterns in writing and showing writers how their writing works in different categories to accomplish varying objectives reflecting the range and variety of audience experience that contiguous words of surface english can prime the authors present a theory of language as an instrument of rhetorically priming audiences and a catalog of english strings to implement the theory the project creates a comprehensive map of the speaker and writer's implicit knowledge about predisposing audience experience at the point of utterance the book begins with an explanation of why studying language from the standpoint of priming not just meaning is vital to non question begging theories of close reading and to language education in general the remaining chapters in part i detail the steps taken to prepare a catalog study of english strings for their properties as priming instruments part ii describes in detail the catalog of priming categories including enough examples to help readers see how individual words and strings of english fit into the catalog the final part describes how the authors have applied the catalog of english strings as priming tools to conduct textual research
The New Century Perfect Speaker 1901

in the early twentieth century three women of color helped shape a new world of ethnographic
discovery ella cara deloria a sioux woman from south dakota zora neale hurston an african
american woman from florida and jovita gonzález a mexican american woman from the texas
borderlands achieved renown in the fields of folklore studies anthropology and
ethnolinguistics during the 1920s and 1930s while all three collaborated with leading male
intellectuals in these disciplines to produce innovative ethnographic accounts of their own
communities they also turned away from ethnographic meaning making at key points in their
careers and explored the realm of storytelling through vivid mixed genre novels centered on
the lives of women in this book cotera offers an intellectual history situated in the
borderlands between conventional accounts of anthropology women's history and african american
mexican american and native american intellectual genealogies at its core is also a meditation
on what it means to draw three women from disparate though nevertheless interconnected
histories of marginalization into conversation with one another can such a conversation reveal
a shared history that has been erased due to institutional racism sexism and simple neglect is
there a mode of comparative reading that can explore their points of connection even as it
remains attentive to their differences these are the questions at the core of this book which
offers not only a corrective history centered on the lives of women of color intellectuals but
also a methodology for comparative analysis shaped by their visions of the world

Information from auditory feedback plays an important role in speech motor control. This has been shown in particular in experiments that make real-time changes to speakers' own productions which are fed back to them while speaking. E.g., Houde and Jordan 1998. In response, speakers change their articulations so that their own altered feedback sounds more like the target word, while such experiments have succeeded in showing the importance of the role of
auditory feedback they have focused on the acoustic output of the speech system the fact that speakers did change their production in response to altered auditory feedback the experiments presented here focus on how speakers change their motor plans using the novel addition of ultrasound imaging well documented cases of articulatory variation in american english provided the test case to study this question the articulatory strategies which speakers use to compensate for the altered feedback are evidence of how much knowledge they have about how their articulations map onto acoustics these experiments consider how individual vocal tract anatomy might affect this knowledge chapter 2 uses an articulatory synthesizer with three different palates to show that there is a more sensitive map between articulation and acoustics for flatter than more domed palates this provided the motivation for chapter 3 which tested whether these differences influenced variability in the production of normal unperturbed speech this ultrasound experiment found that people with flatter palates reduce their articulatory variability in comparison with people who have more domed palates reducing articulatory variability effectively constrains acoustic variability in r production but not s production chapter 3 found significant differences in articulatory variability that correlated strongly with palate shape chapter 4 presents an experiment that uses ultrasound to capture the strategies that speakers use during adaptation to altered auditory feedback to test whether these production differences determined by palate shape carry over into how speakers make corrections to speech production on line in one block speakers said the target word head and their f1 was gradually raised in a second block speakers said the target word hood and their f2 was gradually raised the ultrasound revealed how speakers search their articulatory acoustic space and settle on a compensation strategy a global effect of palate shape was not seen in compensation degree of compensation did not correlate with palate shape if palate shape does inform articulatory habits or the detail in a speaker s knowledge of how their articulation maps onto acoustics this knowledge does not influence speakers compensation degree despite a lack of overall trend in amount of compensation palate shape did correlate with secondary characteristics in compensation finally chapter 5 describes a preliminary study where speakers said the target word heard and their f3 was gradually raised the modeling in chapter 2 predicted that a generally effective way to lower f3 is to raise and retract the tongue to minimize constriction size a strategy that every speaker used the results from this dissertation suggest that while palate shape influences articulatory and acoustic variability in normal unaltered speech this behavior is not predictive of how much speakers will
compensate when presented with altered feedback only of certain secondary characteristics of this compensation speakers overall compensation is likely impacted more by higher level factors which may influence sensitivity to auditory and somatosensory feedback

The Wireless Age 1924

imagine a time when a killer disease took lives at a rate rivaling covid 19 in 2020 and 2021 and continued that grim harvest year after year decade after decade such a nightmare scenario played out in the state of arkansas and across the united states throughout the nineteenth century and well into the twentieth when the scourge of tuberculosis afflicted populations stalking the great killer is the gripping story of arkansas s struggle to control tuberculosis and how eventually the state became a model in its effective treatment of the disease to place the story of tuberculosis in arkansas in historical perspective the authors trace the origins of the disease back to the stone age as they explain it became increasingly lethal in the nineteenth century particularly in europe and north america among u s states arkansas suffered some of the worst ravages of the disease and the authors argue that many of the improvements in the state s medical infrastructure grew out of the desperate need to control it in the early twentieth century arkansas established a state owned sanitarium in the northwestern town of booneville and thirty years later the segregated black sanitarium outside little rock these institutions helped slow the great killer but at a terrible cost removed from families and communities patients suffered from the trauma of isolation joseph bates saw this when he personally delivered an uncle to the booneville sanitarium as a teen in the 1940s in the 1960s bates now himself a physician and his physician colleague paul reagan overcame a resistant medical political system to develop a new approach to treating the disease without the necessity of prolonged isolation this approach consisting of brief hospitalization followed by outpatient treatment became the standard of care for the disease americans today having gained control of the disease in the united states seldom look back yet in the age of the covid 19 pandemic this compelling history based on extensive research and eyewitness testimony offers valuable lessons for the present about community involvement in public health the potential efficacy of public private partnerships and the importance of forward thinking leadership in the battle to eradicate disease

Speakers of the Non-Han Languages and Dialects of China 2002

Originally published in 1974, this is an introductory text on the basic processes in communication with each chapter written by an eminent theorist in one of the main disciplines dealing with communication. It both surveys the range of issues and presents the individual author's personal theoretical approach in each case. Though introductory, the chapters here while attempting to be representative and to avoid unnecessary jargon are careful to not oversimplify. Each author presents an original thesis providing a first-hand glimpse of scholarly work in the discipline showing the great diversity among the approaches and levels of analysis used in the study of communication, of great usefulness to students of psychology, language, linguistics, media, and social history.
