Introduction to Signals and Systems Properties of Systems

Oct 21 2022 May 18 2023

A signal is an electric or electromagnetic current carrying data that can be transmitted or received. Mathematically represented as a function of an independent variable e.g., density, depth, etc. Therefore, a signal is a physical quantity that varies with time, space, or any other independent variable by which information can be conveyed.

difference between analog and digital signal byju's

Sep 19 2022

Analog and digital signals are the types of signals carrying information. The major difference between both signals is that the analog signals have continuous electrical signals, while digital signals have non-continuous electrical signals.
