modern electronics depend on nanoscaled technologies that present new challenges in terms of testing and diagnostics. Memories are particularly prone to defects since they exploit the technology limits to get the highest density. This book is an invaluable guide to the testing and diagnostics of the latest generation of SRAM, one of the most widely applied types of memory. Classical methods for testing memory are designed to handle the so-called static faults, but these test solutions are not sufficient for faults that are emerging in the latest very deep sub-micron VDSM technologies. These new fault models, referred to as dynamic faults, are not covered by classical test solutions and require the dedicated test sequences presented in this book.

This volume includes selected contributions presented during the 2nd edition of the international conference on water-energynexus, which was held in Salerno, Italy, in November 2018. This conference was organized by the sanitary environmental engineering division seed of the University of Salerno, Italy, in cooperation with advanced institute of water industry at kyungpook National University, Korea, and with the Energy and Resources Institute TERI, India. The initiative received the patronage of UNESCO World Water Association Programme WWAP and of the International Water Association IWA and was organized with the support of Springer MENA publishing program Arab Water Council AWCI, Korean Society of Environmental Engineering KSEE, and Italian Society of Sanitary Environmental Engineering professors GITISA, with the support of international experts invited as plenary and keynote speakers. The conference aimed to give a platform for Euro Mediterranean countries to share and discuss key topics on such water energy issues through the presentation of nature-based solutions, advanced technologies, and best practices for a more sustainable environment. This volume gives a general and brief overview on current research focusing on emerging water energy nexus issues and challenges and its potential.
applications to a variety of environmental problems that are impacting the euro mediterranean zone and surrounding regions a selection of novel and alternative solutions applied worldwide are included the volume contains over about one hundred carefully refereed contributions from 44 countries worldwide selected for the conference topics covered include 1 nexus framework and governance 2 environmental solutions for the sustainable development of the water sector 3 future clean energy technologies and systems under water constraints 4 environmental engineering and management and 5 implementation and best practices intended for researchers in environmental engineering environmental science chemistry and civil engineering this volume is also an invaluable guide for industry professionals working in both water and energy sectors

an advanced discussion of linear models with mixed or randomeffects in recent years a breakthrough has occurred in our ability to draw inferences from exact and optimum tests of variance component models
generating much research activity that relies on linear models with mixed and random effects this volume covers the most important research of the past decade as well as the latest developments in hypothesis testing it compiles all currently available results in the area of exact and optimum tests for variance component models and offers the only comprehensive treatment for these models at an advanced level statistical tests for mixed linear models combines analysis and testing in one self contained volume describes analysis of variance anova procedures in balanced and unbalanced data situations examines methods for determining the effect of imbalance on data analysis explains exact and optimum tests and methods for their derivation summarizes test procedures for multivariate mixed and random models enables novice readers to skip the derivations and discussion on optimum tests offers plentiful examples and exercises many of which are numerical in flavor provides solutions to selected exercises statistical tests for mixed linear models is an accessible reference for researchers in analysis of variance experimental design variance component analysis and linear mixed models it is also an important text for graduate students interested in mixed models

the results of a study are presented which provided additional experimental loop irradiation space for the aecdrd testing program it was a premise that the experiments allocated to this reactor were those which could not be accommodated in the mtr etr or in existing commercial test reactors to accomplish the design objectives called for a reactor producing perturbed neutron fluxes exceeding $10^{15}$ thermal n cm$^{-2}$ sec and $1.5 \times 10^{15}$ epithermal n cm$^{-2}$ sec to accommodate the experimental samples the reactor fuel core is four feet long in the direction of experimental loops this is twice the length of the mtr core and a third longer than the etr core the vertical arrangement of reactor and experiments permits the use of loops penetrating the top cap of the reactor vessel running straight and vertically through the reactor core the design offers a high degree of accessibility of the exterior portions of the experiments and offers very convenient handling and discharge of experiments since the loops are to be integrated into the reactor design and the in pile portions installed before reactor start up it is felt that many of the problems encountered in mtr and etr experience will cease to exist installation of the loops prior to startup will have an added advantage in that the flux variations experienced in experiments in etr every time a new loop is installed will be absent the advanced test reactor has a core configuration that provides essentially nine flux trap regions in a geometry that is almost optimum for cylindrical experiments the geometry is similar to that of a fourleaf clover with one flux trap in each leaf one at the intersection of the
leaves and one between each pair of leaves the nominal power level is 250 mw the study was carried out in
eough detail to permit the establishment of the design parameters and to develop the power requirement
which conservatively rated will definitely reach the flux specifications a critical mockup of an arrangement
similar to atr was loaded into the engineering test reactor critical facility auth
