those organizations through the myriad of challenges to true success as
measured by contribution to business value building a data warehousing

common reason for data warehouse project failure is insufficient focus
on the business users and business problems in an effort to help people
gain success this book takes the proven business dimensional lifecycle
approach first described in best selling the data warehouse lifecycle
toolkit and applies it to the microsoft sql server 2005 tool set
beginning with a thorough description of how to gather business
requirements the book then works through the details of creating the
target dimensional model setting up the data warehouse infrastructure
creating the relational atomic database creating the analysis services
databases designing and building the standard report set implementing
security dealing with metadata managing ongoing maintenance and growing
the dw bi system all of these steps tie back to the business
requirements each chapter describes the practical steps in the context
of the sql server 2005 platform intended audience the target audience
for this book is the it department or service provider consultant who is
planning a small to mid range data warehouse project evaluating or
planning to use microsoft technologies as the primary or exclusive data
warehouse server technology familiar with the general concepts of data
warehousing and business intelligence the book will be directed
primarily at the project leader and the warehouse developers although
everyone involved with a data warehouse project will find the book
useful some of the book s content will be more technical than the
typical project leader will need other chapters and sections will focus
on business issues that are interesting to a database administrator or
programmer as guiding information the book is focused on the mass market
where the volume of data in a single application or data mart is less
than 500 gb of raw data while the book does discuss issues around
handling larger warehouses in the microsoft environment it is not
exclusively or even primarily concerned with the unusual challenges of
extremely large datasets about the authors joy mundy has focused on data

Welcome to the proceedings of ICCHP 2010. We were proud to welcome participants from more than 40 countries from all over the world to this year’s ICCHP. Since the late 1980s, it has been ICCHP’s mission to support and reflect development in the field of assistive technologies, accessibility, and inclusion with a focus on scientific quality. ICCHP has become an important reference in our field. The 2010 conference and this collection of papers once again fulfilled this mission. The international programme committee comprising 106 experts from all over the world selected 147 full and 44 short papers out of 328 abstracts submitted to ICCHP. This acceptance ratio of about half of the submissions demonstrates our strict pursuit of scientific quality both of the programme and in particular of the proceedings. In your hands are an impressive number of experts agreed to organize special thematic sessions (STS) for ICCHP 2010. These STS help to bring the meeting into sharper focus in several key areas in turn this deeper level of focus helps to collate a state of the art and mainstream technical, social, cultural and political developments.
