Children's Education

The book looks at the progress made towards real partnerships with parents and an eminently practical account of the advantages of working with parents and the ways in which this can be achieved. It will be of special value to student teachers and practicing teachers and to parents interested and involved in their children's education. The authors review national trends and developments since the issue was first seriously raised by the Plowden report in 1967.

Focus on one urban primary school reveals that even such schools are not providing the children with the best possible start. The language and methods of teaching are considered. The teaching of reading is discussed. The book concludes by summarizing the findings and making suggestions for improvements.

The No Child Left Behind Act of 2001 is then examined. The act was intended to improve the education of all children by raising standards for all schools and providing schools with the resources they need to meet these standards. The act included provisions for accountability, standards, and assessments, and it provided funding for states and local school districts to improve the quality of education for all students.

The book concludes by summarizing the findings and making suggestions for improvements. It provides a valuable resource for educators, policymakers, and parents who are working to improve the education of all children.

Towards a parent education policy 1981

Confident parents, confident kids lays out an approach for helping parents and the kids they love hone their emotional intelligence so that they can make wise choices, connect and communicate well with others even when patience is thin and become socially conscious and confident human beings. How do we raise a happy, confident kid and how can we be confident that our parenting is preparing our child for success? Our confidence develops from understanding and having a mastery over our emotions, aka emotional intelligence, and helping our children do the same. Like learning to play a musical instrument, we can fine tune our ability to skillfully react to those crazy, wonderful, big feelings that naturally arise from our child's constant growth and changes. Moving from chaos to harmony, we want our children to trust that they can conquer any challenge with hard work and persistence. Even when patience is thin, we want them to become socially conscious and confident human beings.

101 Ideas for Parent Conferences, Grades K - 6 2012-10-22

Literature suggests that identifying factors which hinder parent participation inside and outside of the classroom are beneficial in providing teacher candidates with the support and skills needed to build and uphold these important parent-teacher relationships. The purpose of this study was to identify student teachers' use and implementation of science in a bag when it was no longer a required course-based assessment. The take-home science activity acted as the elaboration component of the 5Es lesson. Teacher candidates designed and taught in the classroom utilizing household items and directly involved parents in their child's education. The purposeful sample was comprised of six teacher candidates during their student teaching practicum. The last semester of the childhood education teacher certification program, this collective case study centered on student teachers' use of the focused activity science in a bag in order to gain knowledge of challenges faced in applying take-home science kits and working with parents. Data collection was comprised of student teacher and parent interviews, candidate reflections, and in-class observations. The data was analyzed using the constant comparative method.
Seminars data collection occurred throughout the seven week student teaching practicum. The four research questions were: 1. What factors do teacher candidates identify as interfering with their ability to implement science in a bag during student teaching placements? 2. What factors do teacher candidates identify as enhancing their ability to carry out science in a bag? 3. What forms of support do teacher candidates believe are important to their success in implementing science in a bag during student teaching? 4. How do teacher candidates deal with obstacles when implementing science in a bag? Despite the fact that no teacher student was prohibited from implementing science in a bag, the level to which candidates valued and utilized this instructional strategy varied compared to how they were taught and practiced it during the science methods course. Some student teachers attempted to hide their feelings toward science in a bag, however, their actions revealed that they were simply carrying out the instructional strategy because they had agreed to implement it, not because they appreciated its worth to students and their families. Altering candidate beliefs in one semester prior to student teaching proved difficult, especially when cooperating teachers were demonstrating and encouraging methodologies which were frowned upon during the science methods course. Therefore, this study also raised issues with teacher education and identified the need to better align educational philosophies taught throughout the program and those showcased by cooperating teachers if science education reform is to transpire. Teacher candidates very often abandoned the inquiry-based modes of instruction taught to them during the science methods course prior to student teaching and replaced them with ideas and suggestions from their cooperating teacher approaches which were more traditional and teacher-centered. Cooperating teacher opinions and suggestions appeared to take precedence over what was taught and practiced during their preparation coursework. Candidates prior beliefs and experiences with education appeared to dominate their teaching repertoire. The culmination of their own K-12 education and much of their undergraduate courses made altering their beliefs toward inquiry-based methodologies difficult during only one semester prior to student teaching. Therefore, all candidates reverted back to some level of teacher-centered recipe-like science lessons and tasks. It was also noted that the candidates understanding of hands-on versus inquiry learning was often blurred. Hands on learning was often demonstrated and applauded by cooperating teachers as well as parents once they responded to science in a bag surveys and interviews further supporting this misconception by praising hands-on learning. In some cases, it was the way students learned best, most parents were willing to and enjoyed performing these take-home family activities. Some of the most frequent parent comments related to family time being informed about the content their child was learning in school and the child taking on the role of teacher. Results may be seen as a stepping stone for those interested in involving parents at least in a minimal capacity. As science in a bag requires the level to which candidates acknowledged and embraced student and parent feedback of science in a bag, candidates used this knowledge to better follow-up demonstrations and second bag tasks. Ensuring that all misconceptions were addressed. Other candidates completely ignored constructive criticism or negative comments and focused solely on remarks of approval. Unfortunately, children in this class did not have their misunderstandings clarified. Family conversations may have also exposed the fact that for this student teacher, parent feedback was requested but not valued. Another teacher candidate saw firsthand the importance of establishing positive parent-teacher relationships. When a mother used science in a bag to vent past frustrations she had experienced with the cooperating teacher prior to the candidate's arrival, finally, it became apparent that teacher educators need to acknowledge components of instruction outside content and pedagogy. Many candidates had gained experience when it came to designing lesson materials which were aesthetically pleasing with proper writing quality and conventions. It is clear that this component of teaching is absent and needs to be addressed throughout the program's coursework and during field experience placements.

Effective assessment practices are at the core of high-quality e-portfolios, and ultimately, e-portfolios aim to enhance learning outcomes for students despite increasing expectations for schools to use online tools such as e-portfolios that provide anytime anywhere access for staff, students, and whānau. There is often only a low level of active engagement from parents. Parental disengagement with e-portfolios limits the potential benefits for student achievement. This research sought to examine an intervention designed to engage the disengaged. Fifteen parents participated in an intervention designed to increase parents’ understanding of the positive influence they can have on their child’s learning, improve their technical skills, and provide scaffolding for parents to give high-quality feedback in their child’s e-portfolio. Following the intervention, parents completed an online questionnaire in which they rated their confidence and ability to leave feedback comments in their child’s e-portfolio and the extent to which barriers inhibited their ability to give online feedback. They also rated the usefulness of the e-portfolio workshop. The majority of parents reported an increase in their confidence and ability following the workshop, a decrease in the barriers, and highly rated the usefulness of the workshop. Data on the quantity and quality of parents’ comments were also collected for an 18-week timeframe before the intervention and another 18-week timeframe following the intervention. Findings reveal that compared to the first timeframe, the parent feedback comments in the second timeframe increased in frequency by more than six times. In addition, the feedback comments in both timeframes were coded for the inclusion of specific effective feedback characteristics. This data shows that the quality of parent feedback improved dramatically in the second time period. This study highlights that even a short intervention can have a significantly positive impact on the frequency and quality of parent engagement with their child’s learning. The challenge for schools is finding ways to ensure all parents have access to and can participate in some way in interventions of this type and then to sustain their engagement long term throughout their child’s education.

E-Portfolios 2015

Originally published in 1988, this book discusses the gradual move from the separation of home and school to an increasing acceptance of the central role of parents as partners in their children's education. The book looks at the progress made towards real partnership with parents, with an eminently practical account of the advantages of working with parents, and the ways in which this can be achieved. It will be of special value to student teachers and practicing teachers and to parents interested and involved in their children's education. The authors review national trends and developments since the issue was first seriously raised by the Plowden Report in 1967. Then, focusing on one urban primary school, Redlands Primary School reading, they describe the changes which have taken place over a seven-year period from the perspective of teachers, parents, and children. The book includes a personal account by Angela Redfern, formerly deputy head at Redlands, of what it has been like to be a teacher during this period of change, and telling comments from both parents and children on all aspects of involvement in school partnership. With parents emerges as a course of action which reaps benefits for all concerned, and the authors stress that the developments taking place in schools like Redland are important for all schools irrespective of their social class or ethnic composition.

Parenting Matters 2016-11-21

If you grew up with an emotionally immature unavailable or selfish parent, you may have lingering feelings of anger, loneliness, betrayal, or abandonment. You may recall your childhood as a time when your emotional needs were not met when your feelings were dismissed, or when you took on adult levels of responsibility in an effort to compensate for your parent's behavior. These wounds can be healed and you can move forward in your life. In this breakthrough book, clinical psychologist Lindsay Gibson exposes the destructive nature of parents who are emotionally immature or unavailable. You will see how these parents create a sense of neglect and discover ways to heal from the pain and confusion caused by your childhood. By freeing yourself from your parent's emotional immaturity, you can recover your true nature, control how you react to them, and avoid disappointment. Finally, you will learn how to create positive new relationships so you can build a better life. Discover the four types of difficult parents: The emotional parent instills feelings of instability and anxiety. The driven parent stays busy trying to perfect everything and everyone. The passive parent avoids dealing with anything upsetting. The rejecting parent is withdrawn, dismissive, and derogatory.

The toughest job in the world especially with the increasing number of negative influences and pitfalls facing our kids today from childhood obesity and out of control celebrity culture to the dangers of the internet and credit card debt. Larry Winget has never been one to shy away from tough truths and what he says here may well be difficult for some parents to swallow. We are in the midst of a crisis with our kids today. Are you rearing them in a bubble? Are you providing them with the tools and skills they need to succeed in a world that is rapidly changing? Larry’s message to parents is to teach your kids to become the best adults they can be. But don’t expect your kids to improve until you improve yourself. You are your own fault. Larry’s readers have found this book to be a valuable resource in their own parenting journey.

Commentaries on the Laws of England 1872

I have had my days when I thought I did things wrong. I doubted myself and felt like I needed that push from the universe to tell me that it is okay. This book is an effort to give you that invisible push that pat on the back and a shoulder to cry on. It is a compilation of our efforts over a period of time that you have liked and shared on Instagram. I have had so many parents reach out in DMs and WhatsApp saying you read my mood exactly or I just needed this today. That’s what this book is about. To show you that we are in this together. To show you a mirror for you to realize what you should focus on more about parenting and what you should let go of.
